Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Chen et al.(5,500,900).

Consider claim 1. Chen et al. teach a head-related transfer function model for use with 3D sound applications, comprising:

- (a). A plurality of Eigen filters (fig 5a, #42 & 43);
- (b) A plurality of spatial characteristic functions are adaptively combined with said plurality of Eigen filters (fig 5a, #106 & 107); and
- (c). A plurality of regularizing models (the spline model, col 5, lines 66 67 through col 6, lines 1 –5) adapted to regularize said plurality of spatial characteristic (fig 5a, #107 & 108) functions prior to said respective combination with said plurality of Eigen filters (fig 5a, #51 & 52). The spline method explain that the regularizing is done in the STCF's and FETF's measurements (col 5, lines 18 43).

Consider claim 2. Chen et al. teach the head-related transfer function model for use with 3D sound applications according to claim 1, further comprising:

A summer (fig 5a, # 80 & 81) operably coupled to said plurality of combined Eigen filters combined with said plurality of regularized spatial characteristic functions to provide said head-related transfer function model (fig 5a, #51 and 52)

Art Unit: 2643

Consider claim 3. Chen et al. teach the head-related transfer function model for use with 3D sound applications according to claim 1, wherein:

Said plurality of regularizing models are each adapted to perform a generalized spline model (col 5, lines 66 – 67 through col 6, lines 1 –5). The spline method explain that the regularizing is done in the STCF's and FETF's measurements (col 5, lines 18 – 43.

Consider claim 4. Chen et al. teach the head-related transfer function model for use with 3D sound applications according to claim 1, further comprising:

A smoothness control operably coupled with said plurality of regularizing models to allow control of a trade-off between localization and smoothness of said head-related transfer function (col 5, lines 27 - 43).

Consider claim 5. Chen et al. teach a head-related impulse response model for use with 3D sound applications, comprising:

A plurality of Eigen filters (fig 5a, #51 & 52);

A plurality of spatial characteristic functions are adapted to be respectively combined with said plurality of Eigen filters (fig 5a, #106 & 107); and

A plurality of regularizing models adapted to regularize said plurality of spatial characteristic functions (fig 5a, #106 & 107) prior to said respective combination with said plurality of Eigen filters (fig 5a, #51 & 52). (The ref for this claim is in col 5, lines 29 – 43)

Art Unit: 2643

Consider claim 6. Chen et al. teach the head-related impulse response model for use with 3D sound applications according to claim 5, further comprising:

A summer adapted to sum said plurality of combined Eigen filters combined with said plurality of regularized spatial characteristic functions to provide said head-related impulse response model (fig 5a, # 80 & 81).

Consider claim 7. Chen et al. teach the head-related impulse response model for use with 3D sound applications according to claim 5, wherein:

Said plurality of regularizing models are each adapted to perform a generalized spline model (spline model explained at col 5, lines 1 –43).

Consider claim 8. Chen et al. teach the head-rerlated transfer function model for use with 3D sound applications according to claim 5, further comprising:

A smoothness control in communication with said plurality of regularizing models to allow control of a trade-off between localization and smoothness of said head-related transfer function (col 5, lines 28 - 33).

Consider claim 9. Chen et al. teach a method of determining spatial characteristic sets for use in a head-related transfer function model, comprising:

Constructing a covariance data matrix of a plurality of measured head-related transfer functions (col 4, lines 40 - 67);

Performing an Eigen decomposition of said covariance data matrix to provide a plurality of Eigen vectors (col 4, lines 14 – 40);

Determining at least one principal Eigen vector from said plurality of Eigen vectors (col 6, lines 14 – 49).; and

Art Unit: 2643

Projecting said measured head-related transfer functions back to said at least one principal Eigen vector to create said spatial characteristic sets (col 5 & 6, lines 56-67 and 1-23).

Consider claim10. Chen et al. teach a method of determining spatial characteristic sets for use in a head-related impulse response model, comprising:

Constructing a covariance data matrix of a plurality of measured head-related impulse responses (col 4, lines 40 – 67);

Performing an Eigen decomposition of said covariance data matrix to provide a plurality of Eigen vectors (col 4, lines 14 – 40);

Determining at least one principal Eigen vector from said plurality of Eigen vectors (col 6, lines 14 – 49); and

Back-projecting said measured head-related impulse responses to said at least one principal Eigen vector to create said spatial characteristic sets (col 5 & 6, lines 56 – 67 and 1- 23).

Consider claim 11. Chen et al. teach that the apparatus for determining spatial characteristic sets for use in a head-related transfer function model, comprising:

means for constructing a covariance data matrix of a plurality of measured head-related transfer functions (col 4, lines 40 – 67);

Means for performing an Eigen decomposition of said covariance data matrix to provide a plurality of Eigen vectors (col 4, lines 14 – 40);

Means for determining at least one principal Eigen vector

Art Unit: 2643

from said plurality of Eigen vectors (col 6, lines 14 – 49); and

Means for back-projecting said measured head-related transfer functions to said at least one principal Eigen vector to create said spatial characteristic sets (col 5 & 6, lines 56 - 67 and 1 - 23).

Consider claim 12. Chen et al. teach apparatus for determining spatial characteristic sets for use in a head-related impulse response model, comprising:

Means for constructing a covariance data matrix of a plurality of measured head-related impulse responses (col 4, lines 40 – 67);

Means for performing an Eigen decomposition of said covariance data matrix to provide a plurality of Eigen vectors (col 4, lines 14 – 40);

Means for determining at least one principal Eigen vector from said plurality of Eigen vectors (col 6, lines 14 – 49); and

Means for back-projecting said measured head-related impulse responses to said at least one principal Eigen vector to create said spatial characteristic sets (col 5 & 6, lines 56 - 67 and 1 - 23).

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lonnie Ray, whose telephone number is (703)305 – 3279).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor can be reach on (703) 305-4708.

Any response to this action should be mail to:

Commissioner of Patents and Trademarks

Washington, D. C. 20231

or fax to:

(703) 308 – 6306 or (703) 308 – 6296 (Group's Fax Numbers)

Hand delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, Virginia, Sixth Floor (Receptionist).
